Mark Scheme

4367

November 2016

Version/Stage: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

Glossary for Mark Schemes

Examinations are marked to award positive achievement.

Marks are awarded for demonstrating the following interrelated **process skills**.

Representing Selecting the mathematics and information to model a situation.

- **R.1** Candidates recognise that a situation has aspects that can be represented using mathematics.
- **R.2** Candidates make an initial model of a situation using suitable forms of representation.
- **R.3** Candidates decide on the methods, operations and tools, including ICT, to use in a situation.
- **R.4** Candidates select the mathematical information to use.
- **Analysing** Processing and using mathematics.
 - A.1 Candidates use appropriate mathematical procedures.
 - A.2 Candidates examine patterns and relationships.
 - **A.3** Candidates change values and assumptions or adjust relationships to see the effects on answers in models.
 - A.4 Candidates find results and solutions.
- **Interpreting** Interpreting and communicating the results of the analysis.
 - **I.1** Candidates interpret results and solutions.
 - **I.2** Candidates draw conclusions in light of situations.
 - **I.3** Candidates consider the appropriateness and accuracy of results and conclusions.
 - **I.4** Candidates choose appropriate language and forms of presentation to communicate results and solutions.

In particular, individual marks are mapped onto the following skills standards.

Representing Making sense of the situations and representing them. A learner can:

- **Ra** Understand routine and non-routine problems in familiar and unfamiliar contexts and situations.
- **Rb** Identify the situation or problems and identify the mathematical methods needed to solve them.
- **Rc** Choose from a range of mathematics to find solutions.
- Analysing Processing and using the mathematics. A learner can:
 - Aa Apply a range of mathematics to find solutions.
 - Ab Use appropriate checking procedures and evaluate their effectiveness at each stage.
- **Interpreting** Interpreting and communicating the results of the analysis. A learner can:
 - **Ia** Interpret and communicate solutions to multistage practical problems in familiar and unfamiliar contexts and situations.
 - **Ib** Draw conclusions and provide mathematical justifications.

To facilitate marking, the following categories are used:

- M Method marks are awarded for a correct method which could lead to a correct answer.
- A Accuracy marks are awarded when following on from a correct method. It is not necessary to always see the method. This can be implied.
- B Marks awarded independent of method.
- ft Follow through marks. Marks awarded following a mistake in an earlier step.
- **SC** Special case. Marks awarded within the scheme for a common misinterpretation which has some mathematical worth.
- oe Or equivalent. Accept answers that are equivalent.

eg, accept 0.5 as well as $\frac{1}{2}$

Q Answer	Mark	Comments
----------	------	----------

	Any 1 of patio or a flower bed shown with correct size	M1 Ra	Does not have to be in the correct position Does not have to be labelled	
	Patio and both flower beds shown with correct sizes and in correct positions	A1 Rb	Do not have to be labelled Allow patio to be 4 by 10 or 10 by 4	
	Vegetable patch and lawn shown with equal areas	M1 Aa	Do not have to be in the correct positions Do not have to be rectangles	
1(a)	Vegetable patch and lawn with equal area and rectangular	A1 Rb	Do not have to be labelled One single rectangle for each of lawn and veg patch. Must be the biggest they can fit in their remaining space	
	All garden used and all 5 items included and labelled	B1 /		
	Additional Guidance			
	Fully correct diagram with no labels M1A1M1A1B0			
	If the patio is put at the back of the garden then max 4 marks can still be awarded			
	If the patio is 4 by 10 (4 at the front of the garden) then max 4 marks can still be awarded			

	Alternative method 1			
	1000 cm or 1.25 m	B1 Aa	Seen or implied	
	their 1000 ÷ 125 or 10 ÷ their 1.25 or 8	M1 Rb	Units must be compatible	
1(b)	9	A1 /	SC2 8 SC2 he needs 5 more lights	
1(5)	Alternative method 2			
	1000 cm or 1.25 m	B1 Aa	Seen or implied	
	Shows multiples of their 1.25 to at least 8.75 or repeated subtraction of their 1.25 from 10 to at least their 1.25	M1 Rb	Can be cm	
	9	A1 /	SC 2 8 SC 2 he needs 5 more lights	
	Ad	dditional	Guidance	
	The SC2 for he needs 5 more lights may be based on 8 or 9 lights. Further clarification may lead to full marks			
	Examples			
	He needs five more lights as he already	/ has 4	B1 M1 A1	
	He needs 5 more lights as he needs 8 He needs 5 more lights as there are 3 g	japs	B1 M1 A0 B0 M0 A0	

Q Answer Mark Comments

1(c)	40	B1	Ignore units
1(0)		Aa	

	Reverse calculation		
	eg $40 \div 10 = 4$		
1(c)	or	B1ft	
Check	Alternative method	Ab	
	eg Rectangle divided into 40 squares		

	Alternative method 1				
	their 40 ÷ 9 or 4.4()	M1	ft their 40 from (c)		
	or $9 \times 5 = 45$	Rc			
	5	M1	their 4.4() rounded up to nearest integer Only ft their 40 from (c)		
		1	May be seen in a calculation eg $9 \times 5 = 45$ and 5 then used		
	their 5 × 152	M1	their 5 can be a decimal		
		Rb	$n \times 152$ where $n > 1$ but not 750		
	760 and Yes	A2ft	Only ft their 40 from (c) A1ft 760		
		Ι	A1ft Correct conclusion for their value if 1st and 3rd method marks awarded		
	Alternative method 2				
1(d)	750 ÷ 152 or 4.9()	M1 <i>Rc</i>			
	4 (packs can be bought)	M1 /	their 4.9() rounded down to nearest integer May be seen in a calculation		
	their 4 × 9 or 36	M1			
		Rb			
	36 and their 40 and Yes		Only ft their 40 from (c)		
		A2ft	A1ft 36		
			A1ft Correct conclusion for their value if 1st and 3rd method marks awarded		
	Additional Guidance				
	Alt 1 Building up to the first multiple after	Alt 1 Building up to the first multiple after 40 implies the 2nd M1			
	Use of 5 packs will usually gain M2 (unless from incorrect number rounded)				
	A common incorrect answer is 4.4 × 15	2 = 668.8	No This gains M1M0M1A0A1ft		
	Use of more decimal places eg 4.44 ma	ay also be	seen		
	Alt 2 works out that £750 only buys end	ough full p	acks to cover 36m ²		

Use of perimeter of 28 in (c) can gain full ft marks in d

	Alternative method 1			
	240 ÷ 0.5			
	or	M1		
	240 × 2	Aa		
	or 480			
	Identifies the 3 exits, 1120, 1080	B1	Ignores the widest exit (1150)	
	and 800	Rb		
	100 + 200 + 200 or 500		Allow 100 + 200 + 200 + 200 or 700	
			must be adding 3 or 4 doors	
		M1		
		Rc	oe taking two doors from their 480 and	
			checking the third door is big enough for the rest	
			their 480 or 450 can be used	
	480 and 500 and Yes		A1 480 and 500	
		A2	or	
2(a)		Ι	A1ft correct decision for their values	
	Alternative method 2			
	240 ÷ 0.5			
	or	M1		
	240 × 2	Aa		
	or 480			
	Identifies the 3 exits, 1120, 1080 and	B1	Ignores the widest exit (1150)	
	800	Rb		
	their 480 – 200 – 200 = 80 and 80 fits		May use 3 or 4 doors	
	through smallest door	M1	oe eg for 3 doors taking number of people	
	or	Rc	for 2 of the doors away and checking	
	450 - 200 - 200 = 50 and 50 fits though the smallest door		remainder fits the third door	
	480 and valid accurate check of doors	A2	A1 480 and valid check	
	and Yes	Ι	A1 ft correct decision for their values	

	Additional Guidance			
2(a)	If the 1150, 1120 and 1080 doors are chosen then the 3rd mark is for 200 + 200 + 200 or 600			
2(a)	For the final A1 the decision must be based on both their values			
	Examples			
	1) 3 exits 1120, 1080 and 800 give 500 people allowed so Yes M0B1M1A0A0			
	2) 240 ÷ 0.5 = 480 Yes more than 450 are allowed M1B0M0A0A0			
	3) $240 \div 0.5 = 480$, doors allow $200 + 200 + 100 + 100 = 600$ so Yes she is correct M1B0M0A0A1ft (4 doors, one with the wrong size)			
	Treat extra statements after 'Yes' as further working and ignore.			
	Example 480 and 500 Yes a maximum of 500 people are allowed M1B1M1A2			

Q	Answer	Mark	Comments
---	--------	------	----------

	Alternative method 1			
	750 ÷ 3 or 250	M1 <i>Ra</i>		
	750 – their 250 or 250 × 2 or 500	M1 Rc	their 250 cannot be 1/3	
	Their 500 ÷ 4	M1 Rc	Their 500 cannot be 750	
2(b)	(£)125	A1 Aa		
	Alternative method 2	1		
	$1 - \frac{1}{3}$ or $\frac{2}{3}$	M1 <i>Ra</i>		
	Their $\frac{2}{3} \div 4$ or $\frac{2}{12}$ or $\frac{1}{6}$	M1 <i>R</i> c		
	750 ÷ 12 × 2 or 750 ÷ 6	M1 <i>R</i> c		
	(£)125	A1 <i>Aa</i>		

Q Answer	Mark	Comments
----------	------	----------

	750 + 320 + 250 + 120 + 70 or 1510	M1 Ra	
	300 × 8.5(0) or 2550	M1 <i>Rb</i>	
2(c)	Their 2550 – their 1510 or their 2550 – 1000 or 1550 or their 1510 + 1000 or 2510	M1 Aa	their 2550 – (750 + 320 + 250 + 120 + 70) implies M3 their 2550 must be from an attempt to work out total ticket sales their 1510 must be from an attempt to total at least 4 costs
	(£)1040 and Yes or 1550 and 1510 and Yes or 2550 and 2510 and Yes	A2 1	A1(£)1040 or 1550 and 1510 or 2550 and 2510 or A1 ft correct decision for their values if 2 method marks scored

	Alternative method 1		
	5.20 + 1 hour 30 minutes or 6.50	M1 Aa	
	Their 6.50 + their 1 hour 15 minutes or 8.00 – their 6.50	M1 Rc	
	8.05 and No or 1 hour 10 minutes and No	A2 1	A1 8.05 or 1 hour 10 minutes or A1ft correct decision for their value providing both time periods have been used
	Alternative method 2		
	8.00 – 1 hour 30 minutes or 6.30	M1 Aa	8.00 – their 1 hour 15 minutes or 6.45
2(d)	Their 6.30 – their 1 hour 15 minutes	M1 <i>R</i> c	Their 6.45 –1 hour 30 minutes
	5.15 and No	A2 1	A1 5.15 or A1ft correct decision for their value providing both time periods have been used
	Alternative method 3	I	
	8.00 – their 1 hour 15 minutes or 6.45	M1 <i>Aa</i>	
	5.20 + 1 hour 30 minutes or 6.50	M1 Rc	
	6.45 and 6.50 and No or She should leave at 5.15	A2 1	A1 6.45 and 6.50 or A1ft correct decision for their values providing both time periods have been used

	Alternative method 4			
	1 hour 30 minutes + their 1 hour 15 or 2 hours 45	M1 Aa		
	8.00 – 5.20 or 2 hours 40	M1 Rc		
2(d)	2 hours 45 and 2 hour 40 and No	A2 1	 A1 2 hours 45 and 2 hour 40 or A1ft correct decision for their values providing both time periods have been used 	
cont'd	cont'd Additional Guidance For No allow 'she will be (5 mins) late' or 'she should leave 5 mins earlier'			
	Their 1 hour 15 is an attempt to change one and a quarter hours to hours and minutes It cannot be just a quarter or just 15 minutes			
	To award the A1ft both time periods (1 h 30 and one and a quarter hours) must have used			
	Example 1.30 + 1.15 = 2.45			
	8 –2.45 = 5.55 no she can leave at 5.5	5 M1M1A	0A1ft	
	Example 8 – 1 h 30 = 6.30 No M1M0A	0A0		

Q Answer Mark Comments

3a 330	B1 Aa	
---------------	----------	--

	Alternative method 1					
	$300 \div 900 \text{ or } \frac{1}{3}$	M1 <i>Ra</i>	900 ÷ 300 = 3			
3b	Their $\frac{1}{3} \times 60$	M1 Rc	60 ÷ their 3			
	20	A1 Aa	SC1 27.3 or 28 (from 660 used) SC1 15 (from 1200 used)			
Check	reverse or alt method eg 20 × 3 = 60	B1 <i>Ab</i>				
	Alternative method 2					
	900 ÷ 60 or 15	M1 <i>Ra</i>	calories per minute			
	300 ÷ their 15	M1 <i>R</i> c	or builds up to 300 in multiples of 15			
3b Check	20	A1 Aa	SC1 27.3 or 28 (from 660 used) SC1 15 (from 1200 used)			
	reverse or alt method eg 20 × 15 = 300	B1 <i>Ab</i>				
	Ac	ditional (Guidance			
	Alt 1 For the second M1 their 1/3 cannot	ot be ¼ w	orked out by halving and halving again
