CANDIDATE NAME									
CENTRE NUMBER						CANDIDATE NUMBER				

5234400452

COMBINED SCIENCE **0653/43**

Paper 4 Theory (Extended) **October/November 2022**

1 hour 15 minutes

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

INFORMATION

- The total mark for this paper is 80.
- The number of marks for each question or part question is shown in brackets [ ].
- The Periodic Table is printed in the question paper.

This document has **20** pages.

1 **(a)** Fig. 1.1 is a diagram of a wind-pollinated flower.

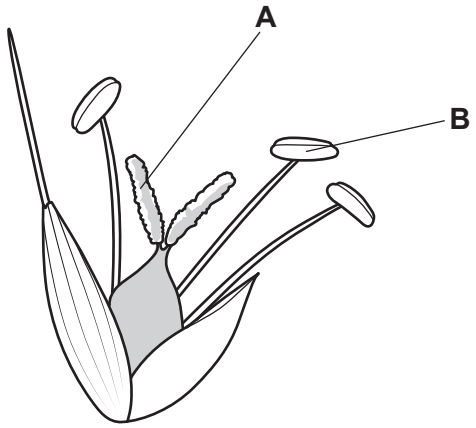

Fig. 1.1

(i) State the names of the parts labelled **A** and **B** on Fig. 1.1.

A .....

B .....
[2]

(ii) On Fig. 1.1, draw a label line and the letter **X** to identify the part that produces ovules. [1]

(iii) Describe **two** adaptations for wind pollination of the flower shown in Fig. 1.1.

1 .....

2 .....
[2]

© UCLES 2022

(b) Fig. 1.2 shows a food web.

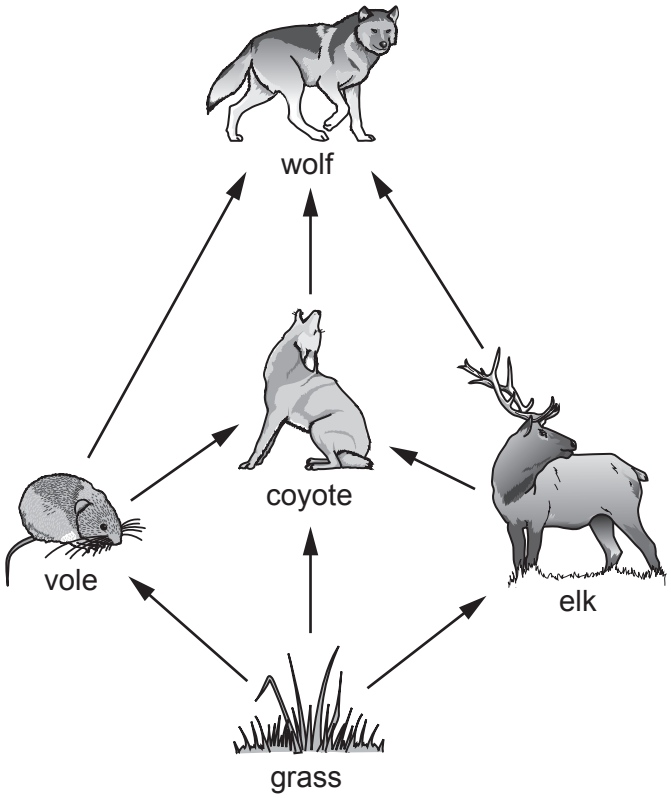

Fig. 1.2

(i) Use Fig. 1.2 to construct **one** food chain that contains the vole.

..... [2]

(ii) Identify **one** organism in Fig. 1.2 that is on the third trophic level.

..... [1]

(iii) Identify **one** organism in Fig. 1.2 that is a primary **and** a secondary consumer.

..... [1]

(c) Grass photosynthesises.

State the balanced chemical equation for photosynthesis.

..... [2]

[Total: 11]

2 The electronic structures of a chlorine atom and a chloride ion are shown in Fig. 2.1.

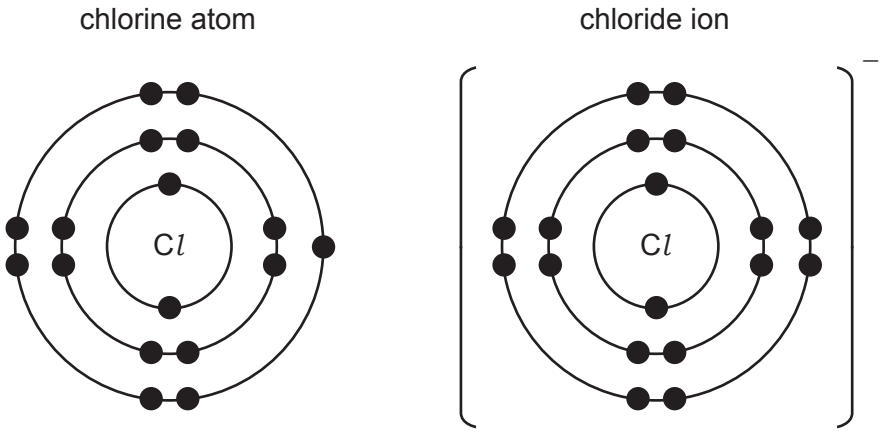

Fig. 2.1

(a) State **two** differences between the chlorine atom and the chloride ion shown in Fig. 2.1.

1 .....

2 .....

[2]

(b) **(i)** Explain how Fig. 2.1 can be used to deduce the proton number of chlorine.

.....

..... [1]

(ii) Explain how Fig. 2.1 can be used to deduce the period number of chlorine in the Periodic Table.

.....

..... [1]

(iii) Element **X** and chlorine are in the same group of the Periodic Table.

Element **X** is less reactive than chlorine.

Suggest the identity of element **X**.

Give a reason for your answer.

element **X** .....

reason .....

.....

[2]

(c) Table 2.1 shows the melting points of chlorine and sodium chloride.

Table 2.1

	melting point / °C
chlorine	–101
sodium chloride	801

Explain the difference in the melting points of chlorine and sodium chloride.

Use ideas about structure and attractive forces in your answer.

.....

.....

.....

..... [3]

[Total: 9]

3 A new world water speed record was set in 1978 by a specially designed speed boat.

Fig. 3.1 shows forces **K**, **L**, **M** and **N** acting on the moving boat.

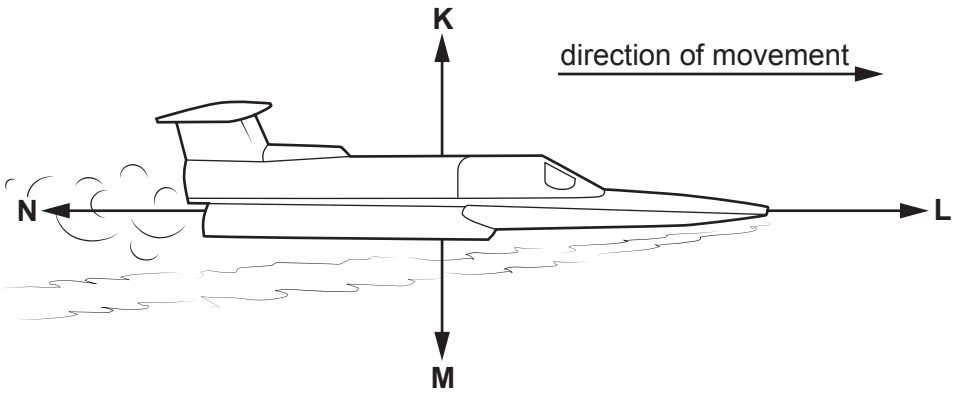

Fig. 3.1

(a) (i) State the letter that represents the friction acting on the boat. ..... [1]

(ii) Force **L** is 10 000 N. Force **N** is 8000 N.

Describe the effect of these forces on the motion of the boat.

.....

..... [1]

(b) The world record speed of the boat is 142 m / s.

(i) Calculate the world record speed of the boat in kilometres per hour (km / h).

speed = ... km / h [1]

(ii) The engine of the boat exerts a force of 15 000 N to accelerate the boat from rest to its world record speed.

The boat moves a distance of 504 m.

Calculate the work done by the engine on the boat.

Give the unit of your answer.

work done = ... unit ..... [3]

© UCLES 2022

(c) Fig. 3.2 shows the speed–time graph for the boat doing a practice run.

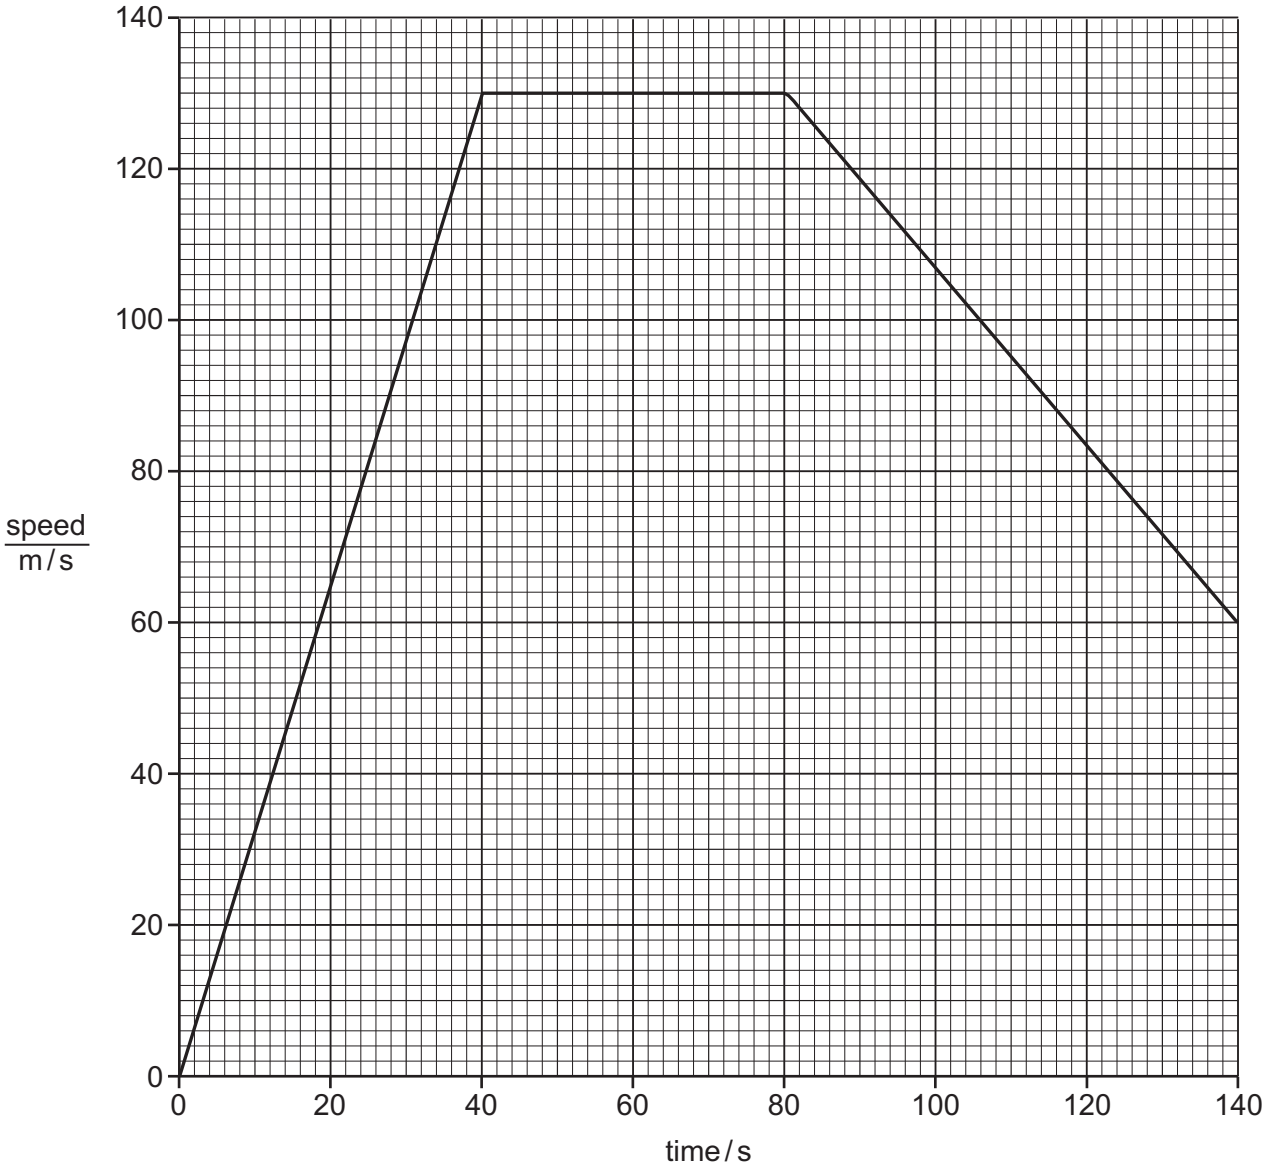

Fig. 3.2

(i) State the maximum speed of the boat shown in Fig. 3.2.

maximum speed = ... m/s [1]

(ii) Use Fig. 3.2 to determine the distance the boat moves between 0 and 80 s.

distance = ... m [3]

[Total: 10]

[Turn over

4 **(a)** Fig. 4.1 is a diagram of a human heart.

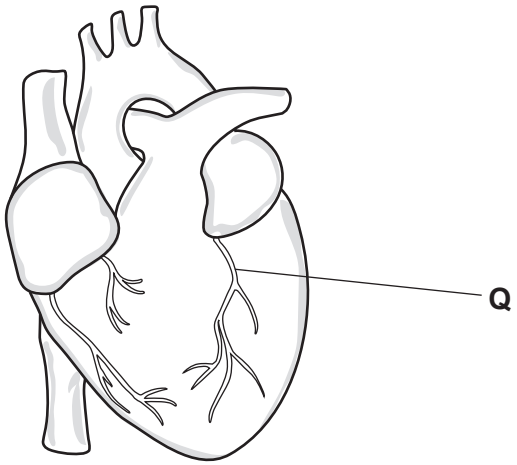

Fig. 4.1

(i) State the name of part **Q** and explain how it is linked to coronary heart disease.

Q .....

explanation .....

.....

[2]

(ii) Risk factors for coronary heart disease include diet and smoking.

State **two** other risk factors for coronary heart disease.

1 .....

2 .....

[2]

© UCLES 2022

(b) Fig. 4.2 shows how physical activity affects heart rate.

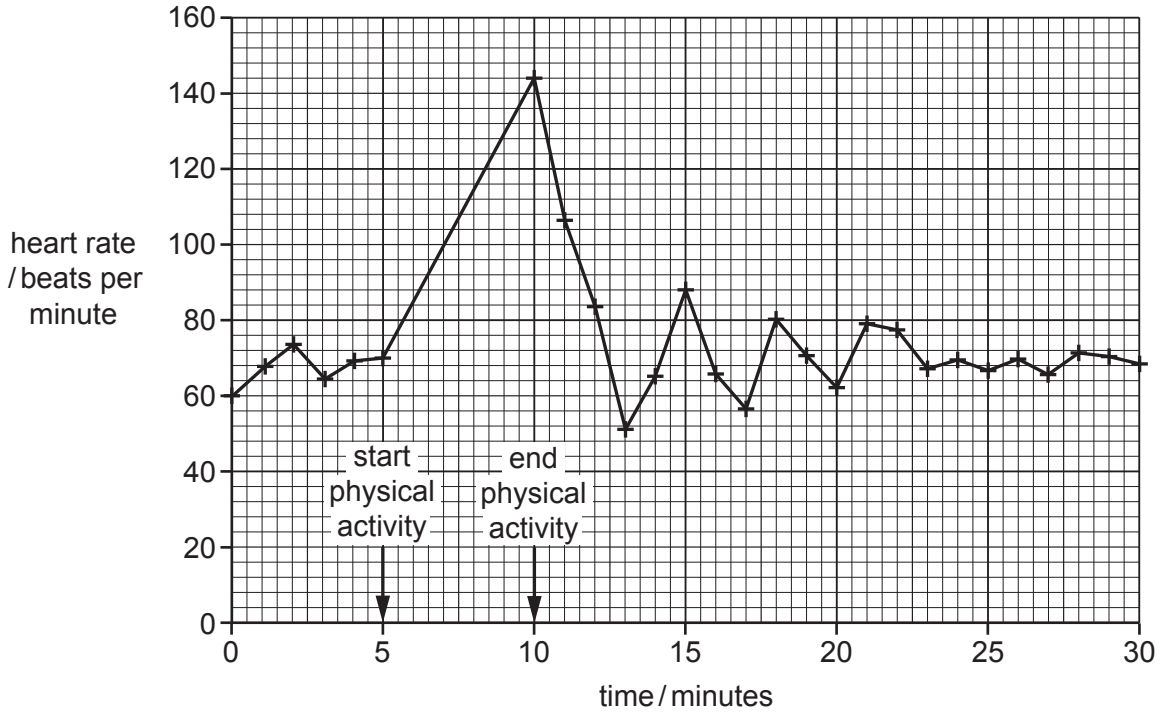

Fig. 4.2

(i) Use Fig. 4.2 to calculate the percentage increase in heart rate between 0 and 10 minutes.

percentage increase in heart rate = ... % [2]

(ii) Explain the shape of the graph in Fig. 4.2 between 5 and 10 minutes.

.....

.....

.....

.....

..... [3]

[Total: 9]

5 **(a)** Iron is extracted from hematite in the blast furnace.

One chemical equation for the extraction of iron in the blast furnace is shown.

$$Fe_2O_3 + 3CO \rightarrow .....Fe + ...$$

(i) Complete the balanced chemical equation. [2]

(ii) Identify the reducing agent in this extraction.

Explain your answer.

reducing agent .....

explanation .....

.....

[1]

(b) Iron rusts when it reacts with oxygen and water to make hydrated iron(III) oxide.

(i) A word equation for the rusting of iron is shown.

iron + oxygen + water → hydrated iron(III) oxide

Explain why rusting is described as an oxidation reaction.

.....

..... [1]

(ii) State **one** method of rust prevention and describe how this method works.

method .....

description .....

.....

.....

[2]

© UCLES 2022

(c) Iron reacts with dilute hydrochloric acid in an exothermic reaction.

(i) The reaction produces iron(II) chloride.

State the formula of iron(II) chloride.

..... [1]

(ii) Explain how a reaction is exothermic.

Use ideas about bonds in your answer.

.....

.....

.....

.....

..... [3]

[Total: 10]

6 Fig. 6.1 shows an electric toaster used to toast one slice of bread.

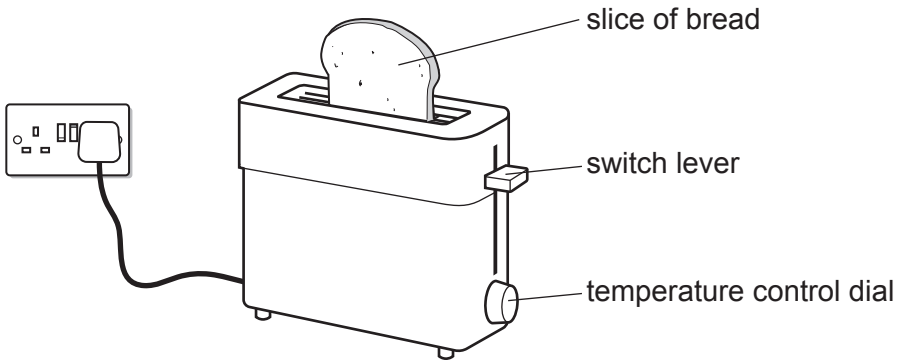

Fig. 6.1

Fig. 6.2 shows the circuit diagram for the toaster.

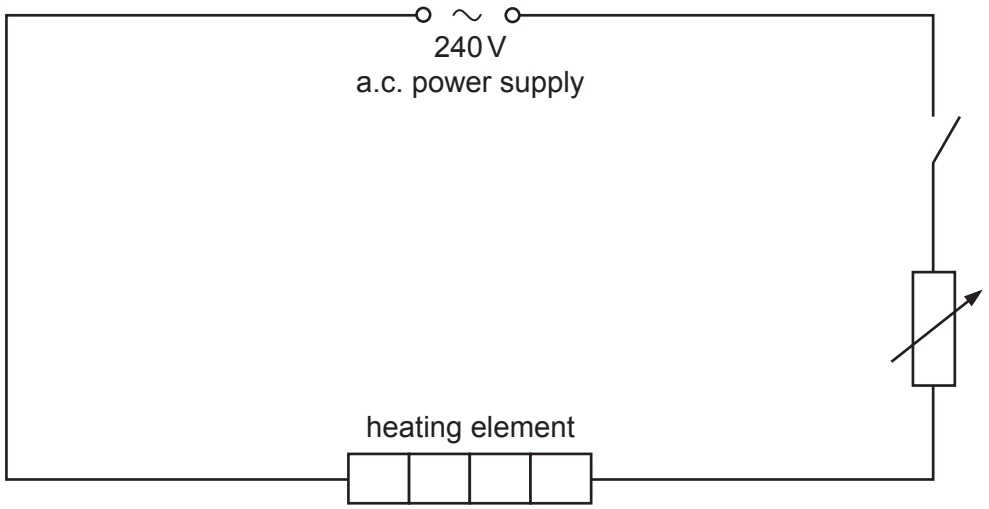

Fig. 6.2

(a) Add a voltmeter to the circuit diagram in Fig. 6.2 to measure the potential difference (p.d.) across the heating element.

Use the correct circuit symbol. [1]

© UCLES 2022

(b) The switch lever is pushed down to switch the toaster on.

The temperature control dial adjusts the variable resistor.

(i) The resistance of the variable resistor is adjusted to 36 Ω.

The resistance of the heating element is 54 Ω.

Calculate the total resistance in the circuit.

resistance = ... Ω [1]

(ii) The resistance of the variable resistor is decreased.

Explain why the thermal energy output from the heating element increases.

.....

.....

.....

..... [2]

(c) Fig. 6.3 shows the circuit diagram for a different toaster that has two heating elements connected in parallel.

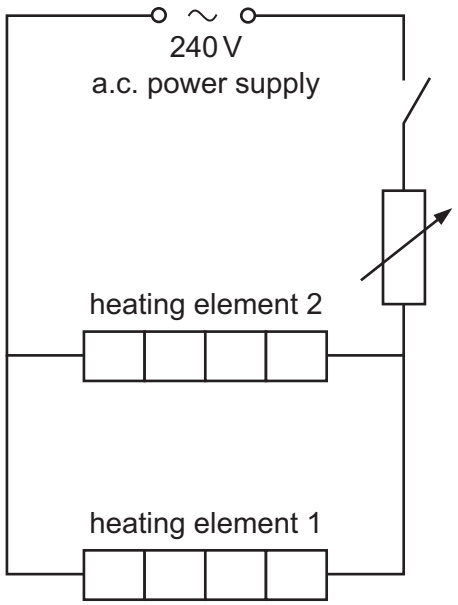

Fig. 6.3

(i) Heating element 1 has a resistance of 41.0 Ω.

Heating element 2 has a resistance of 53.0 Ω.

Show that the combined resistance of the two heating elements in parallel is 23.1 Ω.

[2]

(ii) The variable resistor is adjusted so that the total resistance in the circuit is 60.0 Ω.

The toaster is switched on.

The current in heating element 1 is 2.3 A.

Calculate the current in heating element 2.

current = ... A [3]

[Total: 9]

© UCLES 2022

7 **(a)** Fig. 7.1 shows cells that line the gas exchange system of humans.

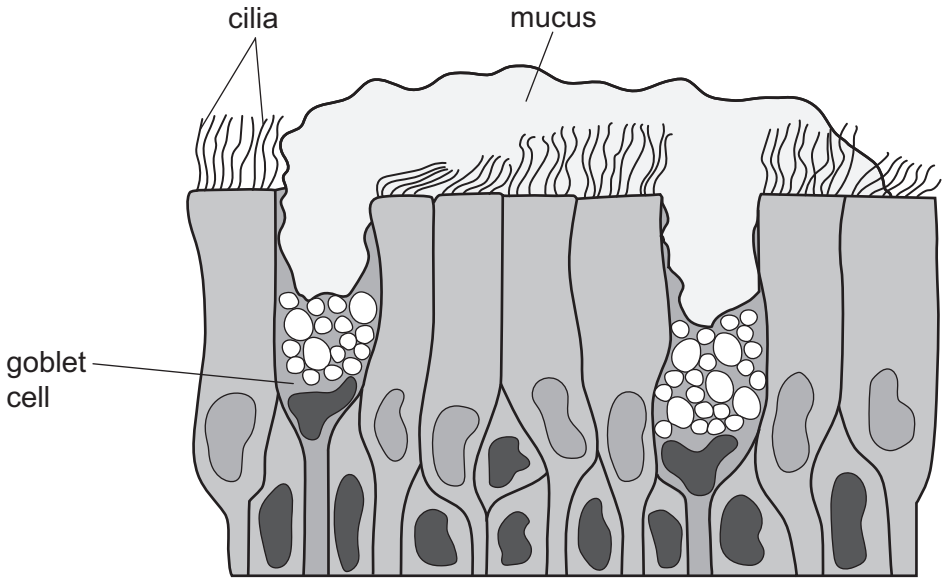

Fig. 7.1

(i) Use Fig. 7.1 to explain how tar in tobacco smoke prevents the cells from protecting the gas exchange system.

.....

.....

.....

.....

..... [3]

(ii) Explain how the carbon monoxide in tobacco smoke affects the function of red blood cells.

.....

.....

..... [2]

(b) The lungs contain a gas exchange surface. This surface is large and thin.

State **two** other features of gas exchange surfaces.

1 .....

2 .....
[2]

[Total: 7]

8 Car engines take in air.

Unreacted air and other gases leave the car in the exhaust gases, as shown in Fig. 8.1.

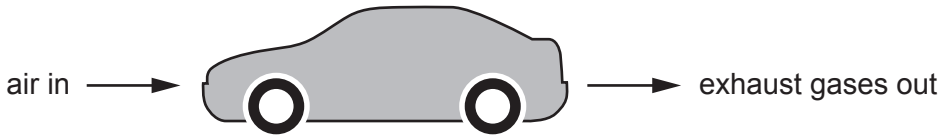

Fig. 8.1

(a) The air entering a car engine is a mixture of gases which includes nitrogen, oxygen, argon and carbon dioxide.

(i) State which **one** of these gases is monoatomic.

..... [1]

(ii) Air is a mixture. Carbon dioxide is a compound.

Explain the difference between a mixture and a compound.

.....

.....

..... [2]

(b) The concentration of oxygen in the air entering a car engine is greater than the concentration of oxygen in the exhaust gases leaving the car.

Explain why.

.....

..... [2]

(c) Car exhaust gases cause an increase in the concentration of carbon dioxide in the atmosphere. This causes an enhanced greenhouse effect.

State **one** impact of an enhanced greenhouse effect.

..... [1]

(d) Carbon dioxide in the air dissolves in rainwater and causes damage to buildings.

State the name of **one** other gas that causes the same problem.

..... [1]

[Total: 7]

© UCLES 2022

9 (a) (i) Fig. 9.1 shows an incomplete electromagnetic spectrum.

On Fig. 9.1, write infrared radiation in its correct place.

← increasing frequency						
gamma radiation			visible light			

Fig. 9.1

[1]

(ii) State the speed of infrared radiation in a vacuum.

..... m/s [1]

(iii) A toaster for toasting bread is one use of infrared radiation.

State **one** other use of infrared radiation.

..... [1]

(b) Fig. 9.2 shows a type of vacuum flask used for carrying a cold liquid at 5 °C.

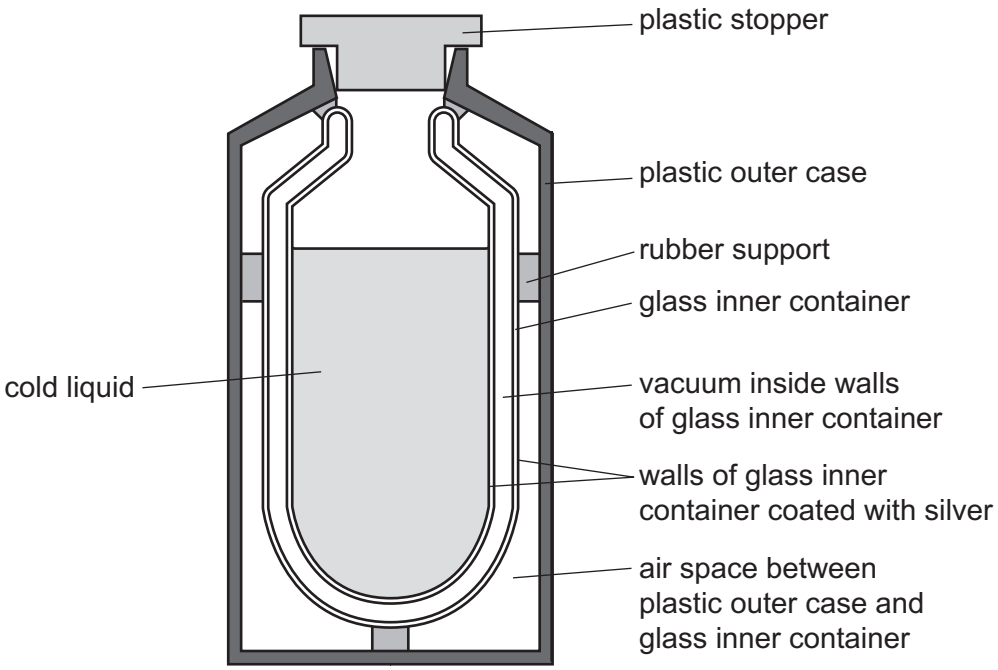

Fig. 9.2

The flask is placed in a room. The temperature of the room is 20 °C.

(i) Describe **one** way that the design of the flask reduces the transfer of thermal energy from the room to the liquid by:

convection .....

.....

radiation. .....

.....

[2]

(ii) Describe how a small amount of thermal energy is transferred from the room to the liquid by **conduction**.

Use ideas about vibrations in your answer.

.....

.....

..... [2]

(iii) A special type of vacuum flask is used to store liquid air at –196 °C.

Table 9.1 shows the boiling points of the main components of liquid air.

Table 9.1

component	boiling point / °C
argon	–186
nitrogen	–196
oxygen	–183

State which component is most likely to form bubbles of gas first.

Give a reason for your answer.

component .....

reason .....

.....
