Paper 4 Alternative to Coursework

May/June 2007
1 hour 30 minutes

Candidates answer on the Question Paper.

Additional Materials: Ruler

Protractor Calculator

## **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE ON ANY BARCODES.

Answer all questions.

The Insert contains Fig. 4 for Question 2.

Sketch maps and diagrams should be drawn whenever they serve to illustrate an answer.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

For Examiner's Use					
Q1					
Q2					
Total					

This document consists of 14 printed pages and 2 blank pages and 1 Insert.

www.PapaCambridge.com 1 Students investigated the central area of a town located on the coast. They surve buildings of the town to identify where the central business district (CBD) was located. A of the town is shown on Fig. 1. The students recorded the height, width and function of the buildings. The hypothesis of the investigation was:

'the height and width of buildings and the price of the land increase towards the centre of the town'.

(a)	Suggest why the increase in the price of the land may affect the height and width of buildings.							
	[3]							
(b)	The students carried out a pilot survey to look at the town. State <b>two</b> reasons for a pilot survey.							
	Reason 1							
	Reason 2[2]							
(c) 10 sites were chosen to sample buildings in the town. At each site, the 10 or buildings were observed. The height of each building was measured by counting sand the width of each building was measured in paces. An average height and was calculated for each site. These are shown on Table 1.								
	(i) Use the results in Table 1 to plot the average building height and width at site C and site F onto Fig. 1. [3]							

Table 1 Average height and width of buildings at each site

Site	Α	В	С	D	Е	F	G	Н	I	J
Average height (storeys)	3	3	2	1	2	1	3	1	2	2
Average width (paces)	12	7	7	7	8	8	8	5	4	5

## Average height and width of buildings at each site

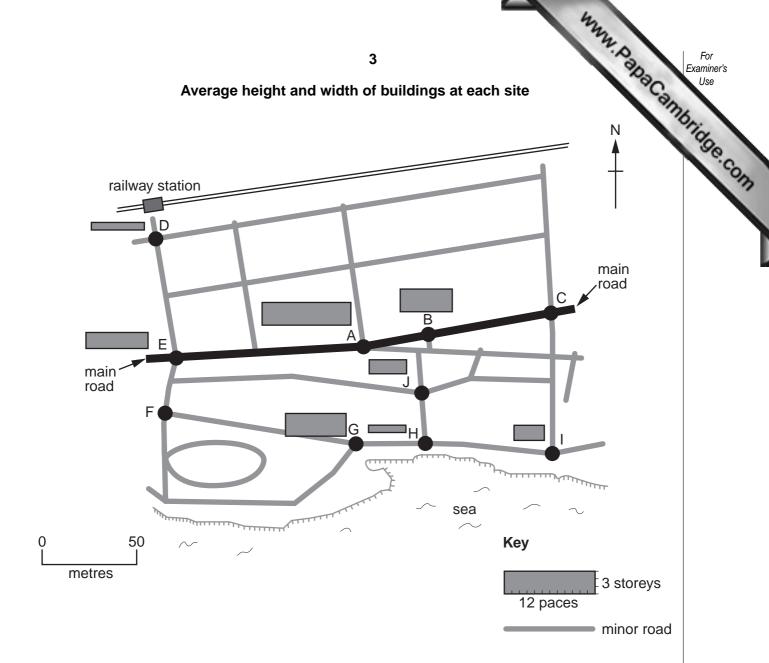

Fig. 1

Study the completed map (Fig. 1) and describe the pattern of building heights and widths shown in the town.
[3]

www.papaCambridge.com (d) (i) The ground floor function of the 10 buildings at each site was recorded. Why students only record the ground floor function of the buildings? (ii) In the boxes below, write 'CBD' next to two functions which are found in the CBD of **BANK** MAIN POST OFFICE DEPARTMENT STORE **GENERAL STORES** 

Tick the hypothesis which would be the best to use to investigate the functions of (iii) the CBD. [1]

**TOURIST OFFICE** 

- A 'Buildings closer to the CBD have a mainly residential function'
- 'Buildings closer to the CBD have a mainly commercial function'
- C 'Buildings closer to the CBD have a mainly tourist function'

LOW COST HOUSING

For Examiner's

(g) Look again at Table 1 and Figs 1, 2 and 3. Write a conclusion to this investigate should comment on the original hypothesis suggesting where the centre of the to located. Give reasons for your decision, stating data from Table 1 and Figs 1, 2 and You should mention building height, building width and the value of the land. Comment on original hypothesis:

- 2 Students investigated a local beach in summer by looking at changes in the beach in The beach was used by local residents and tourists and a sketch map of it is shown in (Insert).
- www.papaCambridge.com (a) (i) The teacher stated that the waves at this beach became more destructive, higher, more frequent and with greater backwash during storms. This caused material near the back of the beach to be larger than at the water's edge. Add labels to the diagram in Fig. 5 to show wave height, wave length, swash and backwash.

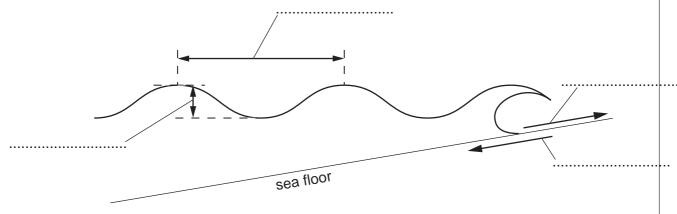

Fig. 5

[2]

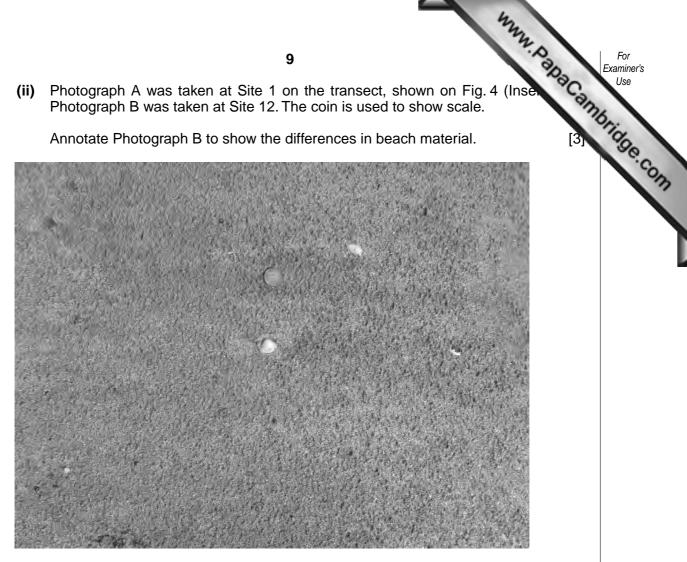

(ii)	What is a destructive wave?
	[1]

- **(b)** The students used a measuring tape to form a transect line, shown on Fig. 4 (Insert), from the water's edge (LWM - low water mark) to the sea wall. A quadrat was used systematically to sample the beach material at 12 sites along the transect line.
  - (i) Define systematic sampling.

Advantages:	
Delimition.	
Definition:	
What are the advantages of using this method rather than random sampling?	

(ii) Photograph A was taken at Site 1 on the transect, shown on Fig. 4 (Inserthotograph B was taken at Site 12. The coin is used to show scale.

Annotate Photograph B to show the differences in beach material.

۹	1100

www.PapaCambridge.com (e) In order to collect data about the 'other material', the students walked along the from W to E, just in front of the sea wall – see Fig. 4 (Insert). They observed the material' present and completed a bi-polar scoring recording sheet every 20 paces. The recording sheet is shown in Fig. 7. (i) Write instructions to the students about how to collect the data using this recording

sheet.
