Calculator, ruler

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- Show all the steps in any calculations and state the units.
- Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

Information

- The total mark for this paper is 120.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Write your answers neatly and in good English.
- Try to answer every question.
- Check your answers if you have time at the end.

Answer ALL questions.

- 1 The diagram shows a kettle of boiling water.

As the water vapour cools it turns into droplets of liquid water.

- (a) The change of state when water vapour changes into liquid water is described as

(1)

- ☐ A boiling
- ☐ B condensation
- ☐ C evaporation
- ☐ D sublimation

- (b) Describe what happens when water vapour cools to form liquid water.

Your answer should include the change in the energy, arrangement and movement of the particles.

(3)

change in energy

.....

.....

change in arrangement

(Total for Question 1 = 4 marks)

- 2 Air is a mixture of gases.
The two main gases present are the elements nitrogen and oxygen.

(a) Another element that is present in air is

(1)

- ☐ A argon
☐ B carbon dioxide
☐ C hydrogen
☐ D sulfur dioxide

(b) Give the formula of a compound that is found in unpolluted air.

(1)

(c) This apparatus in the diagram is used to find the percentage of oxygen in air.

The large pile of copper powder is heated, and the air in the syringe is passed several times from one gas syringe to the other.

The large pile of copper powder turns black. The remaining gas is allowed to cool and its volume is measured.

(i) Explain why the large pile of copper turns black.

(2)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

(ii) Why is the gas allowed to cool before its volume is measured?

(1)

(iii) The small pile of copper powder is then heated and the remaining gas is passed several times over the hot copper. The copper does not turn black.

Suggest why the small pile of copper does not turn black.

(1)

(d) In another experiment, the total volume of air in the apparatus before heating is 150 cm^3 . At the end of the experiment the volume of gas remaining is 125 cm^3 .

Use this information to calculate the percentage of oxygen in this sample of air.

(2)

percentage of oxygen =%

(Total for Question 2 = 8 marks)

3 A student wants to find out if the green colouring in grass is a mixture of dyes.

He uses a solvent to dissolve the green colouring from some grass.

He then separates the solution of the green colouring from the remaining grass.

(a) Which of these methods is used to separate the solution of the green colouring from the remaining grass?

(1)

- ☐ A boiling
- ☐ B condensation
- ☐ C evaporation
- ☐ D filtration

(b) The student uses a dropping pipette to place a drop of the green solution onto a piece of chromatography paper and produces a chromatogram. The diagram shows his results.

(i) Add three more labels to the diagram to show

- the solvent
- the chromatography paper
- the original position of the spot of the green solution

(3)

(ii) Explain how many different dyes are present in the green colouring.

(1)

.....

.....

.....

(Total for Question 3 = 5 marks)

4 The diagram shows the electronic configurations of six different atoms.

- (a) You may use the Periodic Table on page 2 to help you answer this question. Answer each part by writing one of the letters A, B, C, D, E or F in the box provided.

You may use each letter once, more than once or not at all.

Give the letter that represents an atom

(6)

- (i) of a noble gas

- (ii) that contains three protons

- (iii) of phosphorus

- (iv) of an element in Group 4 of the Periodic Table

- (v) of an element in Period 3 of the Periodic Table

- (vi) with a full outer shell of electrons

- (b) Atoms of A and D combine to form a compound containing covalent bonds.

- (i) Complete the sentence to describe a covalent bond.

(2)

A covalent bond is the electrostatic attraction between a pair of

and the of two atoms.

- (ii) Suggest, with reference to electronic configurations, the most likely formula of the compound formed between atoms of A and D.

(1)

(Total for Question 4 = 9 marks)

- 5 A student uses this apparatus to investigate the temperature changes that take place when certain metals are added to dilute sulfuric acid.

This is the student's method:

- use the five metals aluminium, copper, iron, magnesium and zinc
 - add the same amount of each metal separately to 25 cm³ of acid
 - in each case the acid is in excess
 - stir the mixture and record the highest temperature reached
- (a) Use the diagrams of the thermometer in the table to record the highest temperature reached in each experiment.

Record all temperatures to the nearest 0.5 °C.

(3)

	Metal				
	aluminium	copper	iron	magnesium	zinc
Thermometer					
Highest temperature in °C

P 4 5 7 2 8 A 0 9 2 8

6 This question is about hydrogen (H_2) and water.

(a) Hydrogen is a gas at room temperature. It exists as simple molecules.

- (i) Draw a dot and cross diagram to show the arrangement of the electrons in a hydrogen molecule.

(1)

- (ii) Explain why hydrogen has a very low boiling point.

(2)

.....

.....

.....

.....

(b) The symbols for the three isotopes of hydrogen are

 1H
 2H
 3H

- (i) State what is meant by the term **isotopes**.

(2)

.....

.....

.....

.....

- (ii) Complete the table to show the number of protons, neutrons and electrons in each of the three isotopes of hydrogen.

(3)

	Isotope		
	1H	2H	3H
number of protons			
number of neutrons			
number of electrons

- 8 The apparatus in the diagram is used to heat a sample of hydrated copper(II) sulfate crystals, $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$

The equation for the reaction that takes place is

- (a) Draw an arrow on the diagram to show where heat is applied. (1)
- (b) What is the purpose of the ice? (1)
-
- (c) Calculate the maximum mass of water that could be collected when a sample of hydrated copper(II) sulfate of mass 2.50 g is heated. (3)
 $[M_r \text{ of } \text{CuSO}_4 \cdot 5\text{H}_2\text{O} \text{ is } 250]$

mass of water = g

(Total for Question 8 = 5 marks)

- 9 A student investigates the reaction of aqueous sodium hydroxide with two different aqueous solutions of hydrochloric acid, solution X and solution Y.

She carries out two experiments.

Experiment 1

- Using a measuring cylinder, she pours 20 cm^3 of aqueous sodium hydroxide into a conical flask and records its temperature.
- Using a burette, she adds 5 cm^3 of solution X to the conical flask.
- She stirs the mixture with the thermometer and records the temperature.
- She adds further 5 cm^3 volumes of solution X and stirs with the thermometer.
- She records the temperature after each addition of solution X.
- She stops when a total of 40 cm^3 of solution X has been added.

Experiment 2

- She empties the burette and rinses it first with water and then with solution Y. She then fills the burette with solution Y.
- She repeats the experiment using solution Y.

The table shows the results she obtains in Experiment 1.

Experiment 1 – Solution X	
Volume in cm^3 of solution X added	Temperature in $^{\circ}\text{C}$
0	23.0
5	27.0
10	31.0
15	32.2
20	30.6
25	28.9
30	27.3
35	25.6
40	24.0

- (a) Plot the results for Experiment 1 on the grid.
Draw a straight line of best fit through the first three points and a second straight line of best fit through the last six points.

Make sure that the two straight lines cross.

(4)

- (b) (i) Use the graph to determine the volume of solution X that will produce the maximum temperature rise when added to 20 cm³ of the aqueous sodium hydroxide.

(1)

volume of solution X = cm³

- (ii) Use the graph to determine the maximum temperature rise.

(1)

maximum temperature rise = °C

- (c) Why did the student rinse the burette first with water, and then with solution Y, before performing Experiment 2?

(2)

water

.....

solution Y

.....

- (d) The maximum temperature rise in Experiment 2 was less than that in Experiment 1. Suggest a reason why.

(1)

.....

.....

.....

(Total for Question 9 = 9 marks)

10 This question is about hydrochloric acid.

(a) Dilute hydrochloric acid, HCl(aq) , reacts with many metals.

A student observes the reaction of dilute hydrochloric acid with four metals, P, Q, R and S. She uses the same amount of metal in each case.

The table shows her observations.

Metal	Observations
P	very few bubbles produced very slowly
Q	many bubbles produced very quickly
R	many bubbles produced quickly
S	few bubbles produced slowly

(i) Use the information in the table to place the four metals in order of reactivity.

Place the most reactive first.

(2)

most reactive

least reactive

(ii) Give the names of the two products formed when magnesium reacts with dilute hydrochloric acid.

(2)

Product 1

Product 2

(b) Describe a test to show that dilute hydrochloric acid contains chloride ions.

(2)

12 Titanium is a metal that can be extracted from its ore in a three-stage process.

- stage 1 titanium ore is converted into titanium dioxide, TiO_2
 stage 2 titanium dioxide is then converted into titanium chloride, TiCl_4
 stage 3 titanium chloride is converted into titanium, Ti

(a) A titanium ore contains the composition by mass

$$\text{Fe} = 36.8\% \quad \text{Ti} = 31.6\% \quad \text{O} = 31.6\%$$

Show by calculation that the empirical formula of this ore is FeTiO_3

(3)

(b) The equation for the conversion of titanium dioxide into titanium chloride is

Explain which element has been oxidised in this reaction.

(2)

.....

.....

.....

.....

(c) In stage 3

- titanium chloride vapour is passed through molten magnesium in an atmosphere of argon
- the products are allowed to cool to form a solid mixture of titanium and magnesium chloride
- this mixture is crushed into a powder and then added to water to dissolve the magnesium chloride

(i) Write a chemical equation for the reaction between titanium chloride and magnesium.

(2)

(ii) Suggest why this reaction cannot be successfully carried out in an atmosphere of air.

(1)

(iii) Suggest why the mixture is crushed into a powder before it is added to water.

(1)

(d) (i) Describe the bonding in titanium metal.

(2)

(ii) Explain why titanium conducts electricity.

(1)

(Total for Question 12 = 12 marks)

13 Iodine reacts with chlorine to form iodine monochloride, ICl

(a) Write a chemical equation for this reaction.

(1)

(b) Iodine monochloride reacts reversibly with chlorine to form iodine trichloride.

The reaction mixture is allowed to reach a state of dynamic equilibrium.

(i) One feature of a reaction that is in dynamic equilibrium is that both the forward reaction and the backward reaction occur simultaneously.

Give two other features of a reaction that is in dynamic equilibrium.

(2)

1

.....

2

.....

(ii) When the equilibrium mixture is heated, it becomes darker brown in colour.

Explain whether the backward reaction is exothermic or endothermic.

(Total for Question 14 = 4 marks)

15 Butane (C_4H_{10}) is a gas at room temperature and pressure.

The equation for the complete combustion of butane is

Butane is used in an experiment to determine its ΔH of combustion.

(a) State what the symbol ΔH represents.

(1)

(b) The table shows the results of the experiment.

mass of water heated	200 g
mass of butane burned	0.725 g
initial temperature of water	20.2 °C
final temperature of water	43.7 °C

Use this equation to calculate the heat produced when 0.725 g of butane is burned in this experiment.

$$\begin{array}{ccccc} \text{heat produced} & = & \text{mass of water} & \times & 4.2 & \times & \text{temperature rise of water} \\ \text{(in J)} & & \text{(in g)} & & & & \text{(in } ^\circ\text{C)} \end{array}$$

(3)

heat produced = J
