(2)

In another week Sannia works for 41 hours and her total pay for this week is \$430.80

- (b) Calculate the value of the items Sannia sells this week.

(2)

Sannia invested an amount of money for 3 years in a savings account. At the end of each year interest was added to her account.

At the end of the first year the interest added was 5.1% of the amount in the account.

At the end of the second year the interest added was 4.5% of the amount in the account.

At the end of the third year the interest added was 4.5% of the amount in the account.

At the end of the 3 years the amount in the account was \$2123.28

- (c) Calculate the amount of money that Sannia invested.
